

## Product Specification

# Welding Protection

### DESCRIPTION

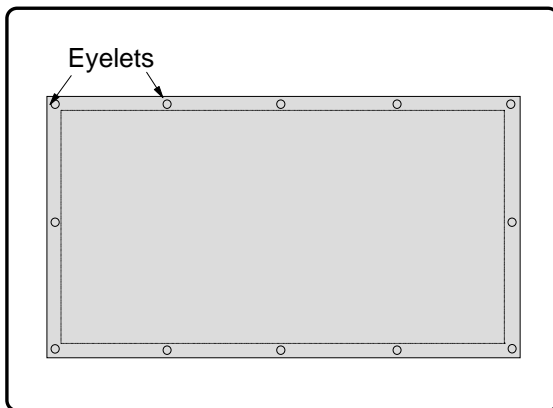

This is a high quality welding blanket designed specifically for weld protection in either the vertical or horizontal application.

The welding blanket / curtain can be manufactured from fire resistant canvas or coated fibreglass fabric or silica depending on the application :-

**Lightweight curtains** for workshop welding bays etc. are made from fire resistant cotton canvas fabric which has excellent resistance to abrasion, flexing and tearing with good flame retardant properties. Standard size is 6m x 6m stitched with eyelets.

**Mediumweight curtains** are made from a coated fibreglass fabric which has excellent heat resistant & flame retardant properties. The silicone / PU rubber coating provides extended life and improved resistance to abrasion and oil / water contamination.

**Heavyweight blankets** are made from a pure silica fabric which can operate continuously at 1000°C. This fabric is highly resistant to molten metal splashes & direct intense heat.

The curtains / blankets can be manufactured to fit customer requirements for any applications with :-

- ❖ Eyelet's
- ❖ Velcro straps

*Please note that heavyweight blankets wider than 900mm will have a stitched seam / join using a fibreglass thread (Non-flammable & very heat resistant).*
